# Risk Level

A Single Level Mapped From All Financial Risk Scores

We created the Risk Level to help clients make faster decisions across millions of public and private companies by providing a quick view of their financial risk level.

Instead of interpreting multiple financial risk models, clients can simply reference the Risk Level which is assigned by automatically selecting the most reliable predictive financial risk score available from the FRISK® Score, PAYCE® Score, Z"-Score, FAST Rating and other scores.

| FRISK® Score | PAYCE® Score | Z"-Score | FAST Rating | Other Scores |

Risk Level

| Low Risk |
| Medium Risk |
| High Risk |

10+ Million Companies Covered

The Risk Level provides financial risk analytics on 10+ million companies worldwide.

Companies are assigned a Risk Level based on data from other financial risk models. For example, if a public company has a low-risk FRISK® Score, the algorithm ignores other less reliable scoring models and categorizes the company as low risk (green). If a private company has a high-risk PAYCE® Score, the algorithm categorizes the company as high risk (red).

Public Company Example

| Risk Level | Low Risk | ▼ |

Credit Score History

Score/Index	2025							
	J	F	M	A	M	J	J	A
FRISK® Score	10	10	10	10	10	10	10	10
DBT Index	9	9	9	9	9	9	9	9
Z"-Score	1.96		2.15			1.81		Z"

Private Company Example

| Risk Level | High Risk | ▼ |

Credit Score History

Score/Index	2025							
	J	F	M	A	M	J	J	A
PAYCE® Score	2	2	2	1	1	1	1	1
DBT Index	9	9	9	9	9	9	9	9
FSR	27	15	14	8	10	8	8	FSR

The Risk Level helps clients make faster business decisions by presenting risk exposure and growth opportunities across their entire portfolio or supplier list.
